## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 14, 2006, has been entered.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for at[ obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6295925 issued to Sarni et al. in view of GB 1060689 and "Sit back and Relax" from International Dryer.

Sarni et al. disclose apparatus for mid-driven flexographic printing presses. The web of material proceeds through a number of printing and drying sections (equivalent to Applicant's heating zones-Column 3). Between the zones is a mid-driven tension feed which controls tension and is equivalent to the tension isolation means required in claim 27. The mid-driven tension controlling section may use nip rollers. Sarni fail to disclose the use of serpentine rollers or that the dryers being used are air heated or that the second heating zone comprises a vacuum belt oven.

GB 1060689 teaches the heat treatment of fabrics and the like using different zones of heat manufactured by different methods of heat formation such as hot air, gas etc (page2). The Examiner is equating this to be the same as the air impingement dryer.

Art Unit: 1771

Further as shown by the "Sit back and Relax" article the use of vacuum belt dryers we known to provide tension-free, shrink and relaxation drying of fabrics with increased drying yields.

Thus a person having ordinary skill in the art at the time the invention was made would have found it obvious to have employed the air heating used by GB 1060689 as the mode of heating in the first zone of Sarni et al. motivated by the desire of wanting the air to be blown uniformly against both surfaces of the web and further to have provided a vacuum belt oven as in the "Sit back and Relax" article in order to produce a tension-free fabric with increased drying yield.

With regard to the use of serpentine rolls, it is the position of the Examiner that using serpentine rolls instead of nip rolls would have been obvious to a skilled artisan, and motivated by the desire to reduce friction between the rolls as the web is being pulled through.

### ***Response to Arguments***

Applicant's arguments with respect to claims 27-29 have been considered but are moot in view of the new ground(s) of rejection.
